Jute:			
India	114		

SUMMARY OF THE CONTENTS OF THIS NUMBER.

An official forecast of the production of field crops in Canada shows a larger yield than last year for all of the small grain crops except buckwheat. Decreased yields are reported for potatoes, beans, alfalfa, fodder corn and sugar beets. Increased yields are expected for husking corn, peas, turnips, and hay and clover.

Latest estimates of the potato acreage in Canada are larger than those previously reported.

Final official figures on the production of crops in Japan for 1920 vary only slightly from semi-official figures previously published. The estimated 1922 production of wheat, barley and oats in Japan is smaller than the amount produced in 1921.

SUMMARY OF THE CONTENTS OF THIS NUMBER, -Cont'd.

The latest estimate of wheat production in British India is slightly smaller than the previous estimate, but between a third and a half larger than the amount produced in 1921.

The probable production of jute in British India this year is slightly less than last year's yield.

The 1921 corn production of Mexico is estimated to be 71,000,000 bushels.

The world raw silk production has been quoted as amounting to 59,000,000 pounds in 1921 as compared with 46,000,000 million pounds in 1920.

The world production of cacao in 1921 was reported to be 431,000 short tons as compared with 407,000 short tons in 1920 and 280,000 short tons in 1913.

The currant crop of Greece for this year is expected to be only about half as large as the previous yield.

The 1921-22 yield of rice in Siam has been estimated to be over 4,000,000 short tons.

Latest estimates show that the numbers of horses, sheep and swine in England and Wales have declined slightly in the last year while cattle have increased in numbers.

The index number of prices in Canada shows wholesale prices for farm products for June, 1922, to have been lower than nearly any other class of commodities. Fish and hides and leather are the only commodities having lower relative prices compared to those for June, 1913.

SUMMARY OF FOREIGN CROP PROSPECTS.

A summary of the latest estimates of wheat production for the United States, Canada, India, Algeria, Tunis, Morocco and Japan indicates an aggregate

LATEST REPORTS CONTINUE TO SHOW
INCREASE IN WHEAT PRODUCTION
OUTSIDE OF EUROPE, AND DECREASED
PRODUCTION IN EUROPE, EXCLUDING
RUSSIA. SEEDING REPORTS ARE
GOOD IN ARGENTINA.

not included in the summary. In Manchuria wheat and rice are below average in condition and in Chosen wheat and rye are poorer than last year. Reports on seeding in Argentina indicate increased acreage of all small grains.

production of about 1,549,000,000 bushels this year as compared with 1,440,000,000 bushels last year. Comparative figures for 14 countries of Europe show a probable production of 892,000,000 bushels this year as against 1,006,000,000 bushels last year.

Russia, Germany, Austria, Yugoslavia, Czechoslovakia, Portugal, Denmark and Holland are

SUMMARY OF FOREIGN CROP PROSPECTS, - Cont'd.

Rain is needed for the corn crops of Hungary, Yugoslavia and Italy. In Rumania the harmful drouth has been broken and in Bulgaria corn prospects are good. In the Matamoros district of Mexico floods have damaged the crop. The corn yield of South Africa is expected to be below that of last year. ---Favorable

CORN HAS SUFFERED FROM LACK OF RAINFALL AND EXCESSIVE HEAT. REPORTS ON ROOT CROPS ARE FAVORABLE IN EUROPE. HAY CROPS ARE GENERALLY GOOD. COTTON REPORTS ARE FAVORABLE.

conditions for root crops have been reported in England, France, Germany and Norway. In Hungary conditions are not so good. In Canada the prospect is for a slightly smaller yield of potatoes than last year. ---Forecasts of the hay crops

in France, Germany and Rumania are favorable. Canada reports a probable increase in the yield of hay and clover over that of last year. --Cotton prospects in Egypt and India are reported to be good. The cotton crop of the Matamoros district of Mexico was hurt by floods. A decreased area of jute is reported in India and a decreased yield of hemp is expected in Italy.

SMALL GRAINS.

Argentina.- Indications are that there will be a larger acreage sown to wheat, oats, rye and flax than last year in Argentina. It is expected that there will be an increase of between 5 and 10 per cent in the wheat acreage and between 10 and 15 per cent in that of flax. A later report from the Bahia Blanca district states that the acreage sown to wheat, barley and oats shows an increase of 20 per cent over last year in that district.

Canada.- Estimates put out by the Canadian Bureau of Statistics forecast a wheat yield of 320,968,000 bushels, oats 509,752,000 bushels, barley 64,881,000 bushels and rye 37,848,000 bushels, as compared with 300,858,000 bushels, 426,233,000 bushels, 59,709,000 bushels and 21,455,000 bushels, respectively, last year.

China (Manchuria).- A long drouth with high temperatures has been threatening destruction to small grain crops, particularly rice. Wheat is below average in condition.

Chosen.- According to a belated report the prospect for Chosen on June 1 was for a wheat crop about 6 per cent less than the 1921 crop and a rye crop about 14 per cent less than last year's harvest.

Colombia.- The short wheat crop in the interior of Colombia has caused increased purchases of foreign flour.

SUMMARY OF FOREIGN CROP PROSPECTS, - CONT'D.

SMALL GRAINS - Cont'd.

Czechoslovakia. - The total wheat outturn of Czechoslovakia is expected to be a good average although there are districts where it is in bad condition. The new crop of barley is reported to be of inferior quality and oats are said to be unsatisfactory.

Denmark. - Up to the last week of July wheat and rye were improving in Denmark but were still below average in condition. Barley and oats were above average.

England. - Official estimates of the cereal harvests of England and Wales place the production of wheat for 1922 at 63,040,000 bushels, barley at 40,720,000 bushels and oats at 74,320,000 bushels as compared with yields of 69,776,000, 42,472,000 and 80,264,000 bushels, respectively for 1921. Storms during the second week in August caused much damage to crops.

France. - No quantitative estimates of the cereal harvests in France have been received. Reports from all over the country state that the wheat crop is much below that of last year. Oats and barley on the other hand are expected to yield much better than in 1921.

Germany. - The rains in July came too late to be of benefit to the cereal crops. Harvesting is late this year. Reports on rye cutting indicate a yield inferior to that of last year.

Hungary. - Reports on threshing indicate that the Hungarian wheat crop will be larger than the last official forecast.

India. - The latest forecast of wheat production in British India places the probable yield at 366,352,000 bushels, as compared with 255,173,000 bushels in 1921.

Italy. - Forecasts for the wheat crop of Italy remain unchanged.

Rumania. - With threshing in full swing, wheat and rye are giving good yields both in quantity and quality. Some fields of barley have not yielded as well as anticipated.

Tunis. - The wheat crop of Tunis this year is estimated at 3,200,000 bushels as compared with 10,400,000 bushels last year. The annual wheat requirement of Tunis for food and seed is placed at 8,800,000 bushels.

SUMMARY OF FOREIGN CROP PROSPECTS, - Cont'd.

SMALL GRAINS, - Cont'd.

South Africa. - The early sown wheat crop has been showing up well. Plowing and sowing are still continuing.

Spain. - A good average outturn is still expected for the wheat crop in Spain although the yields are not very good in the South.

Jugoslavia. - A recent cablegram from Yugoslavia reports that the yield of bread grains is much poorer than anticipated.

CORN.

Argentina. - The condition of the corn crop in Argentina is improving.

Bulgaria. - A report of the corn crop of Bulgaria indicates an excellent crop.

Hungary. - Excessive heat and lack of rain about the middle of July were damaging to the corn crop.

Italy. - Rain is needed to improve the corn crop of Italy.

Mexico. - The corn crop in the Matamoros consular district of Mexico was hurt by floods just about the beginning of the harvest in late June. It is believed that a second crop can be harvested before late fall.

Rumania. - Rains falling during the last of July stimulated hopes in Rumania for a good corn crop which previous dry weather had made doubtful.

South Africa. - The 1922 corn harvest of South Africa has been estimated at about 20 per cent below last year's crop.

Yugoslavia. - Some complaints have been reported of the effect of excessive heat on the corn crop.

ROOT CROPS.

Canada. - Estimates issued by the Canadian Bureau of Statistics give the probable yield of potatoes for the Dominion as 102,974,000 bushels and turnips, etc. as 80,982,000 bushels, as against 107,346,000 bushels and 79,150,000 bushels, respectively, last year.

England. - According to a recent cablegram the condition of the potato crop in England has improved materially during July. Other root crops are also somewhat improved.

France. - Weather conditions in France during the latter part of July favored the potato and other root crops.

SUMMARY OF FOREIGN CROP PROSPECTS, - Cont'd.

ROOT CROPS, - Cont'd.

Germany. - Rainy weather experienced during the last of July was favorable to the growth of root crops.

Hungary. - The potato crop has been hurt somewhat by the excessive heat and lack of rain about the middle of July.

Norway. - The condition of the potato crop in Norway was reported to be average on the first of August, an improvement over the condition a month earlier.

HAY AND FORAGE.

Canada. - The forecast of the yield of hay and clover in Canada for 1922 is 15,545,000 short tons, as compared with a production of 11,366,000 short tons last year.

France. - Rains during the latter part of July have benefited the forage crops of France.

Germany. - Rains in the latter part of July have been beneficial to the second crop of grass in Germany.

Rumania. - The hay crop in Rumania is generally reported to be good.

FIBERS.

Egypt. - Conditions in Egypt are reported to be favorable to the cotton crop and a good yield is expected.

India. - Cotton prospects were excellent up to the first of August in the Central Provinces of British India. Weather has been favorable for cotton generally in India up to about August 1, but further rains would have been welcome. A preliminary forecast of the jute area in India places the acreage at 1,456,546 acres, as compared with 1,513,353 acres in 1921.

Italy. - A decreased yield of hemp is expected this year in Italy, due to decreased acreage in some sections and poor weather conditions in others.

Mexico. - It is reported that the flood of the latter part of June has resulted in a loss of about 75 per cent of the cotton crop of the Matamoros consular district of Mexico. Rains in June and July in the Laguna consular district were of some benefit to the cotton crop but came too late to give the best results.

PRODUCTION OF FIELD CROPS IN CANADA.

Forecast of total yields of crops as indicated by condition on July 31, 1922, compared with final figures of 1921 and 1909-13 average.

	Average	1921	1922
	1909-13		
	1,000 bushels	1,000 bushels	1,000 bushels
Wheat	197,119	300,858	(a) 320,968
Oats	351,690	426,233	509,752
Barley	45,275	59,709	64,881
Rye	2,094	21,455	37,843

(Source: 1922 and 1921, Bureau of Statistics "Field Crops of Canada" Aug. 10, 1922. 1909-13 average, Canada Yearbook, 1915, pages 140-143, Census of Industry, Part 1, Agricultural Statistics, 1917, page 10 and Monthly Bulletin of Agricultural Statistics, Dec. 1910, p.291).

- (a) It will be noted that the official forecast of the wheat production for 1922 is smaller than that previously reported from private sources.
- (b) Four year average, 1910-14.

POTATO ACREAGE IN CANADA.

According to the August estimate of the Canadian Department of Agriculture, the area planted to potatoes for 1922 is 698,900 acres, an increase of about 5,000 acres over their report of July 14, published in Foreign Crops and Markets, August 2.

(Source: Wirtschaft und Statistik, Vol. 2, No. 8, p. 8.)

CURRENT CROP OF GREECE.

The currant crop of Greece this year is estimated at 308,644,000 pounds. The production this year on account of the extreme dryness is expected to be about 50% less than that of last year.

(Source: Le Bulletin des Halles, Bourses et Marches, Paris, July 31, 1922, p. 1.)

RICE CROP IN SIAM.

The total yield of rice in Siam for 1921-22 is estimated to be about 4,410,000 short tons of paddy. The area planted to rice is estimated to be about 6,335,000 acres. It seems likely that the export from this crop will reach 1,500,000 tons. The quality of the crop is reported to be generally good.

(Source: American Consul, Bangkok, Siam, June 23, 1922)

NUMBER OF LIVE STOCK IN ENGLAND AND WALES IN JUNE, 1922.

According to a cablegram dated August 14, 1922, received from the Agricultural Commissioner in London, the preliminary estimate of the Ministry of Agriculture and Fisheries gives the number of live stock in June, 1922, as follows, compared with the number in 1913 and 1921.

Live stock.	Number on -		
	June 4, 1913.	June 4, 1921.	June, 1922.
Horses.....	1,402,000	1,385,000	1,340,000
Cattle.....	5,717,000	5,517,000	5,722,000
Sheep.....	17,130,000	13,832,000	13,437,000
Swine.....	2,102,000	2,505,000	2,297,000
